

# ReSTful OSGi Web Applications Tutorial

Khawaja Shams & Jeff Norris

NASA Jet Propulsion Laboratory  
California Institute of Technology

# Agenda

- Who are we and how did we get here?
- Overview of key technologies
- Brief demo of tutorial application (ReSTBots)
- Tutorial exercises
- Best practices
- Conclusion

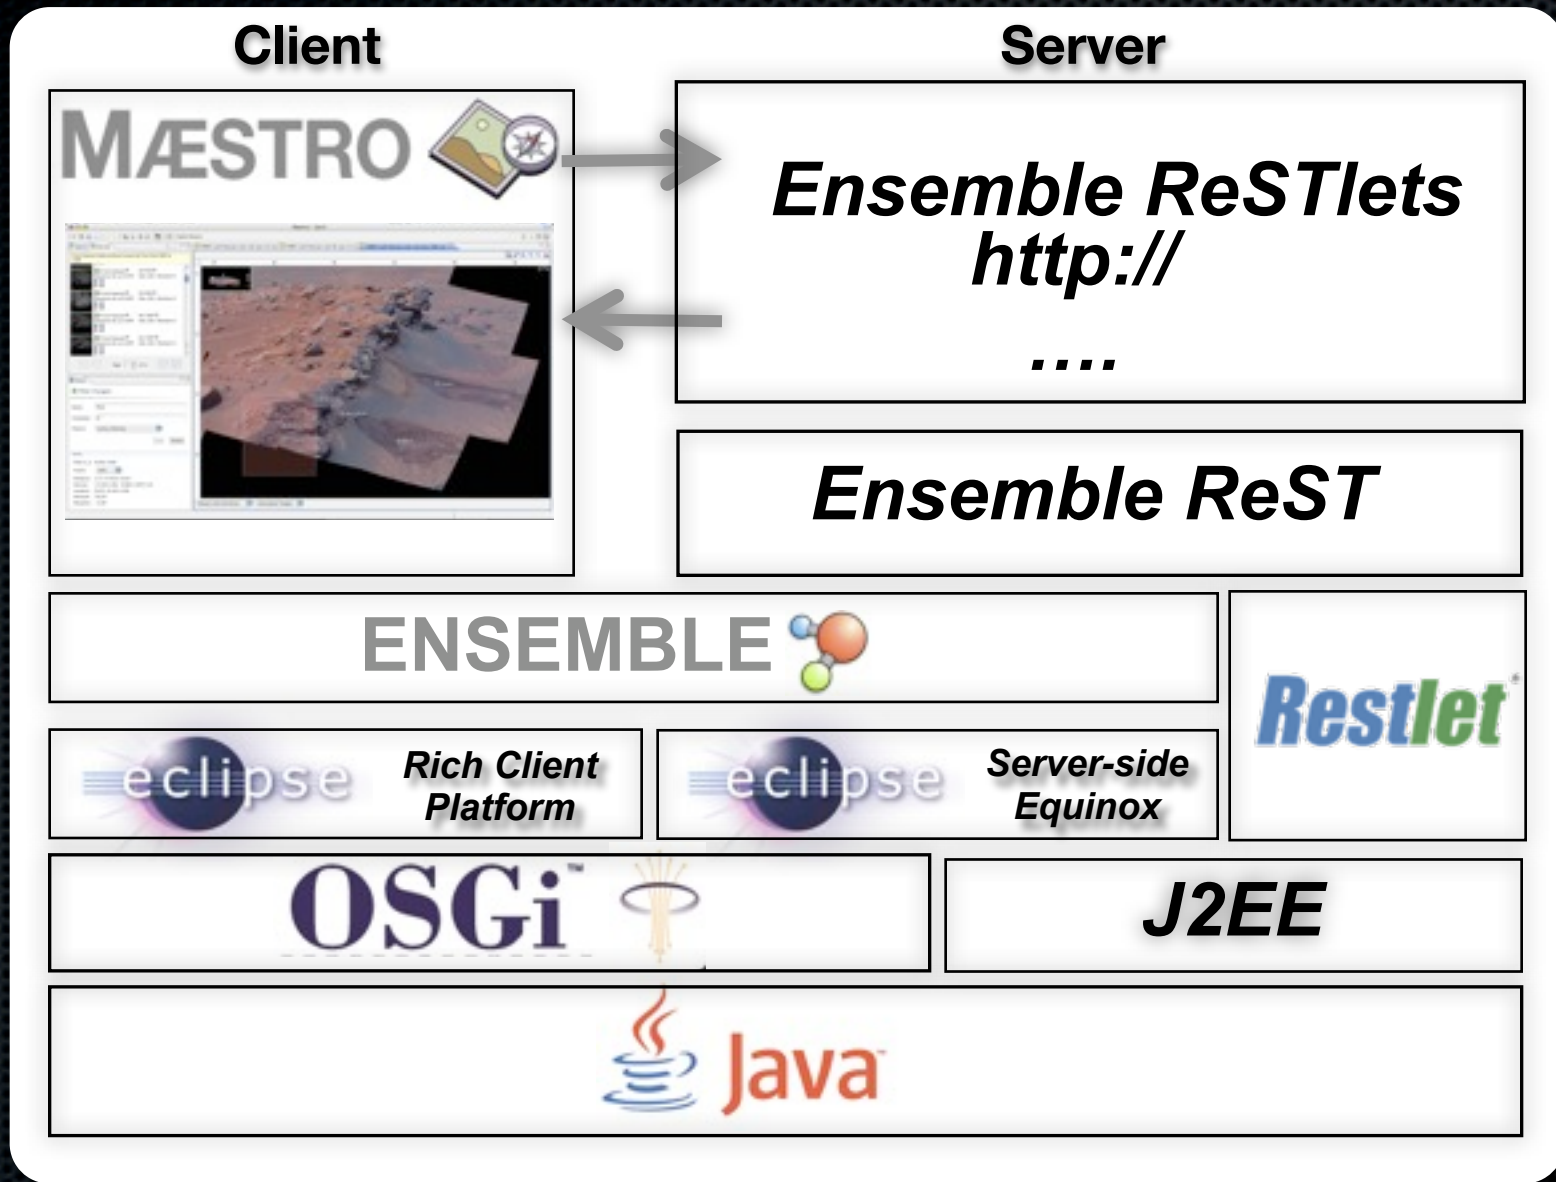

# Who are we?

- Developers of spacecraft operations tools from NASA
- Long-time users of the Eclipse Rich Client Platform
- Recent users of server-side Equinox
- New fans of ReSTful web application development

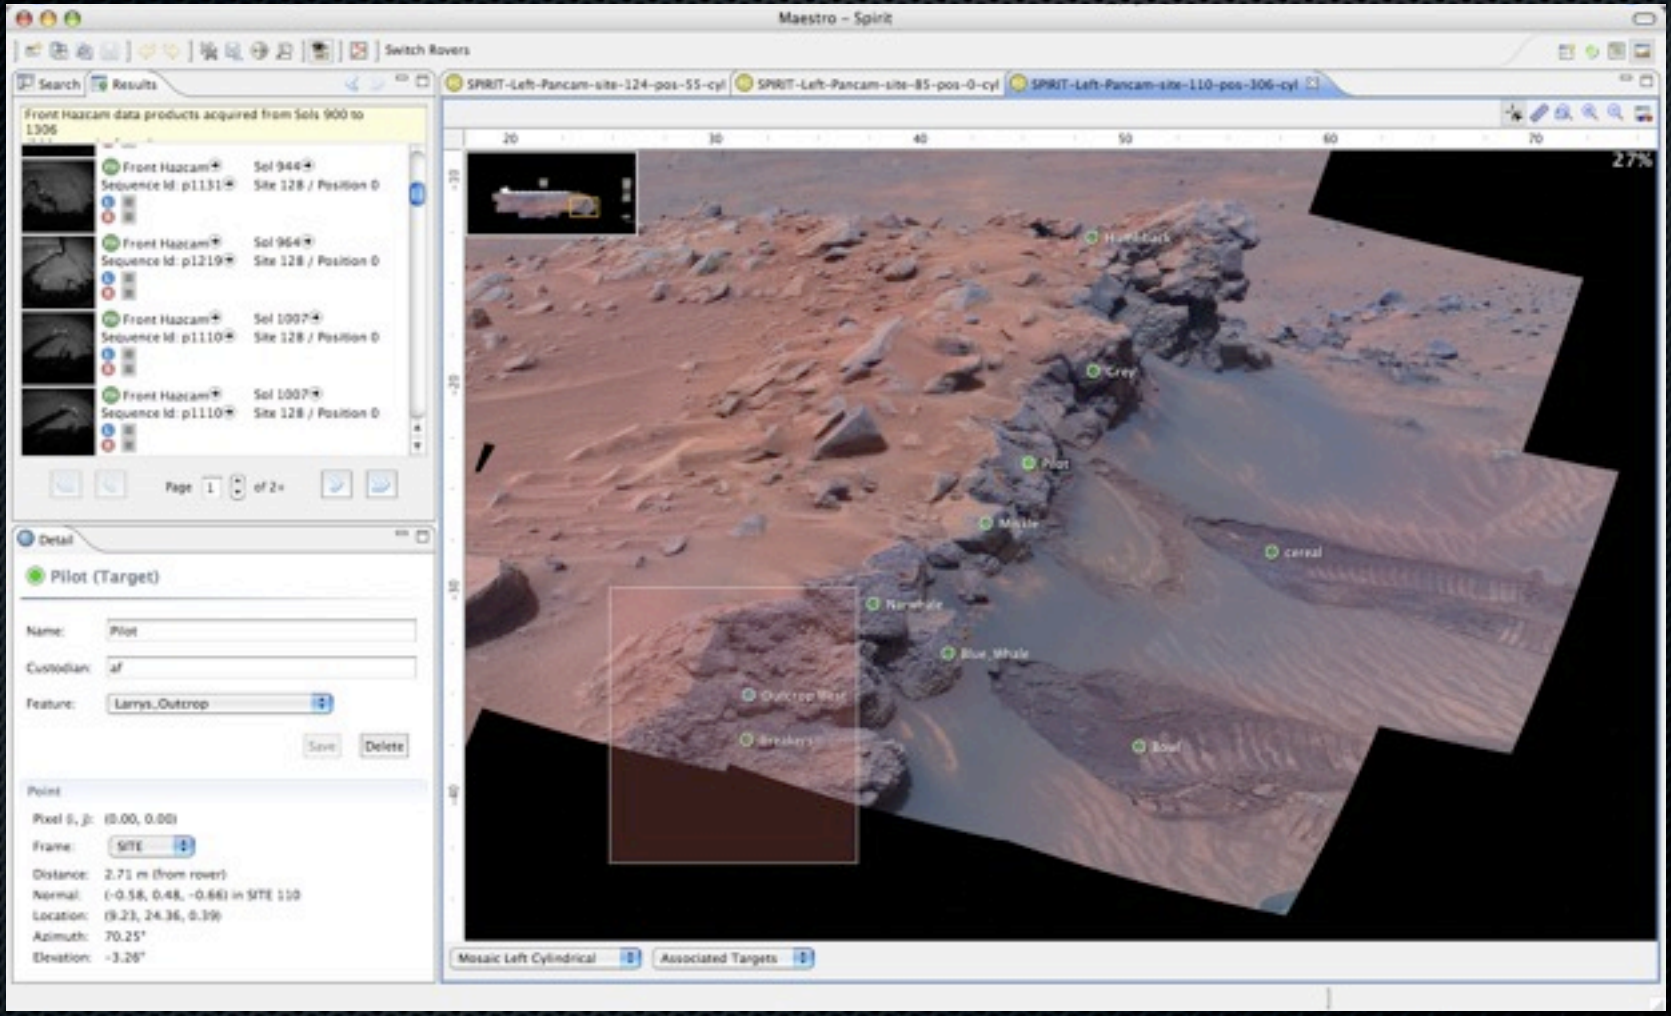

# Overview of Technologies

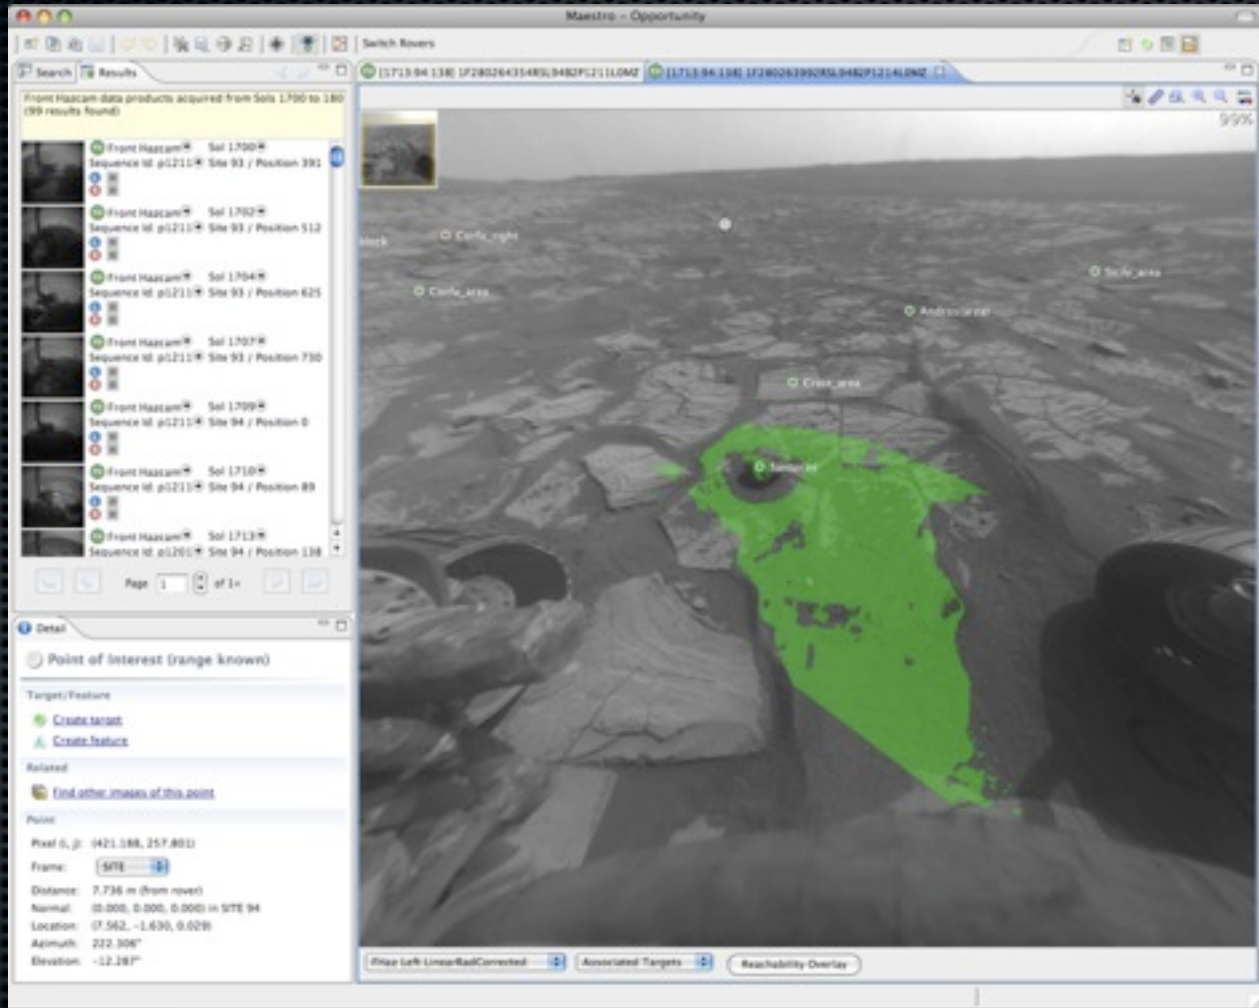

# Maestro, one of our operations tools

# Maestro, one of our operations tools

# Maestro, one of our operations tools

The screenshot displays the Maestro software interface, which is used for mission planning. The main window is titled "MSLICE" and shows a mission plan for "sol\_698\_enu\_sovng\_plan\_working2 698-698".

Name	Scheduled	Start Time	Duration	Seq_ID	ActivityEnergy
sol_698_Supplement_to_REMS_Observation_ENV	<input checked="" type="checkbox"/>	Sol 698 13:20:00	00:08:55	-	0 W/h
sol_698_Prelim_Get_RAD_REMS_Data_ENV	<input checked="" type="checkbox"/>	Sol 698 14:30:00	00:00:30	-	0 W/h
Cat_RAD_Data 1	<input checked="" type="checkbox"/>	Sol 698 14:50:00	00:00:22	-	0 W/h
RAD_Sleep_for_Time 1	<input checked="" type="checkbox"/>	Sol 698 14:50:21	00:19:35	-	0 W/h
Cat_REMS_Data_Session 9	<input checked="" type="checkbox"/>	Sol 698 14:30:00	00:01:00	-	0 W/h
sol_698_Maxcam_optical_depth_AM_ENV	<input checked="" type="checkbox"/>	Sol 698 15:59:00	00:04:44	-	0 W/h
Maxcam_left_OD_IR	<input checked="" type="checkbox"/>	Sol 698 15:59:00	00:02:22	02600	0 W/h
Maxcam_right_OD_IR	<input checked="" type="checkbox"/>	Sol 698 15:52:18	00:02:22	02600	0 W/h
sol_698_Maxcam_optical_depth_PM_ENV	<input checked="" type="checkbox"/>	Sol 698 14:25:00	00:04:44	-	0 W/h
Maxcam_left_OD_IR	<input checked="" type="checkbox"/>	Sol 698 14:25:00	00:02:22	02600	0 W/h
Maxcam_right_OD_IR	<input checked="" type="checkbox"/>	Sol 698 14:27:18	00:02:22	02600	0 W/h
sol_698_Maxcam_Focus2_Focus3_ENV	<input checked="" type="checkbox"/>	Sol 698 12:00:00	00:36:55	-	0 W/h
Maxcam_zStack_Left 1	<input checked="" type="checkbox"/>	Sol 698 14:29:35	00:03:12	-	0 W/h

Subtotal (1 activity): -- -- 00:01:00 -- -- 0 W/h  
Total: Sol 698 09:30:00 24:39:35 -- -- 0 W/h

The interface also features a terrain visualization showing a rocky, cratered landscape. Below the terrain, there are panels for "Activity Data", "Plan Rules", and "Resources". The "Plan Rules" panel shows a list of rules, including "All Rules" and "Claims" for motor controllers.

**Get\_REMS\_Data\_Session 9**

Name: Get\_REMS\_Data\_Session 9  
uptask\_priority: 0  
Start Time: Sol 698 14 30:00  
Duration: 00:01:00  
Observation: sol\_698\_Prelim\_Get\_RAD\_REMS\_Data\_ENV  
Type: Get\_REMS\_Data  
Category: REMS  
Scheduled:   
Seq\_ID:

Arguments: REMS\_download\_rate: 2, REMS\_RCE\_compression: 1.5 bits/pixel  
Children:

# ReSTful space exploration

- Sequences, Plans, Mars Images, and Targets are resources
- Variety of persistence layers
  - Relational Databases
  - CDO Repositories
  - File System
- Stereoscopic range queries, spatial queries, and full text searching capabilities
- Authentication AND authorization via LDAP

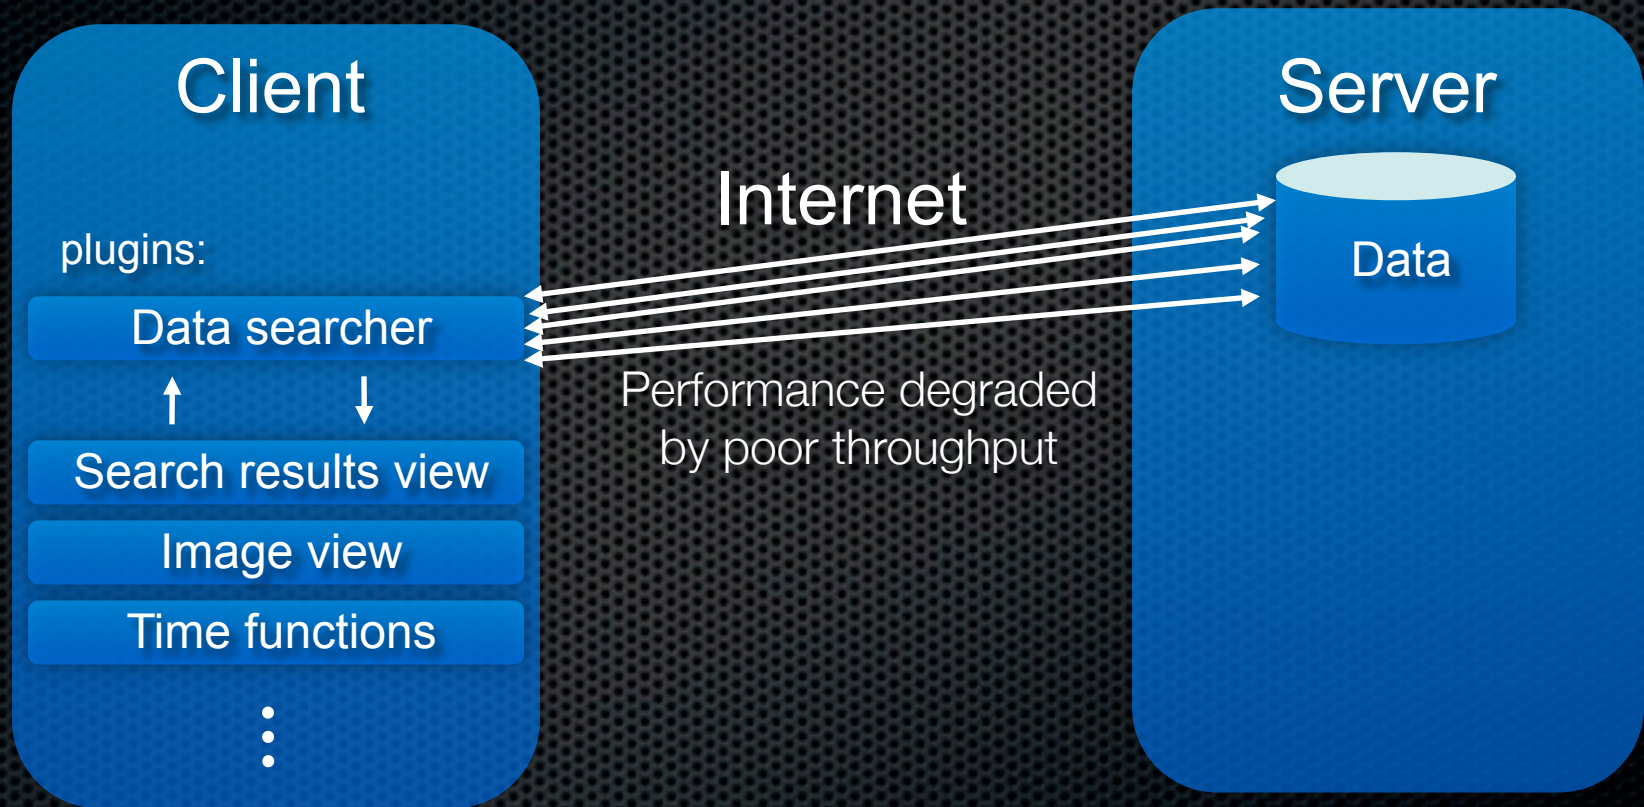

# Customers and Clients

- Customers
  - Scientists
  - Rover Planners
  - Sequence Engineers
- Clients
  - C/C++
  - Python, unix shell scripts
  - ActionScript
  - Java

# What brought us to ReST & Equinox: Migrating capabilities to the server

# What brought us to ReST & Equinox: Migrating capabilities to the server

Internet

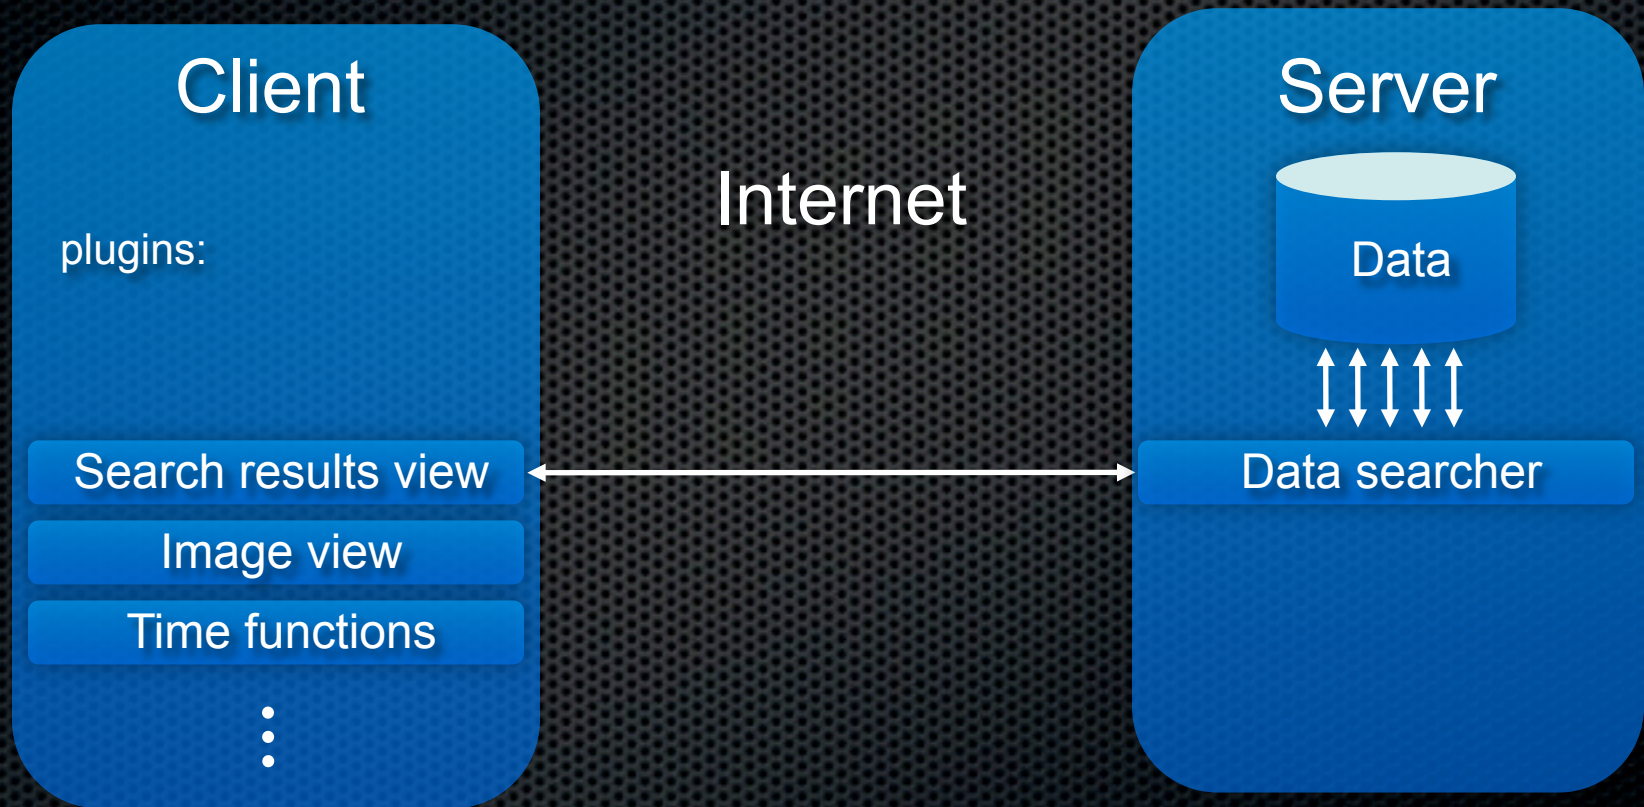

# What brought us to ReST & Equinox: Migrating capabilities to the server

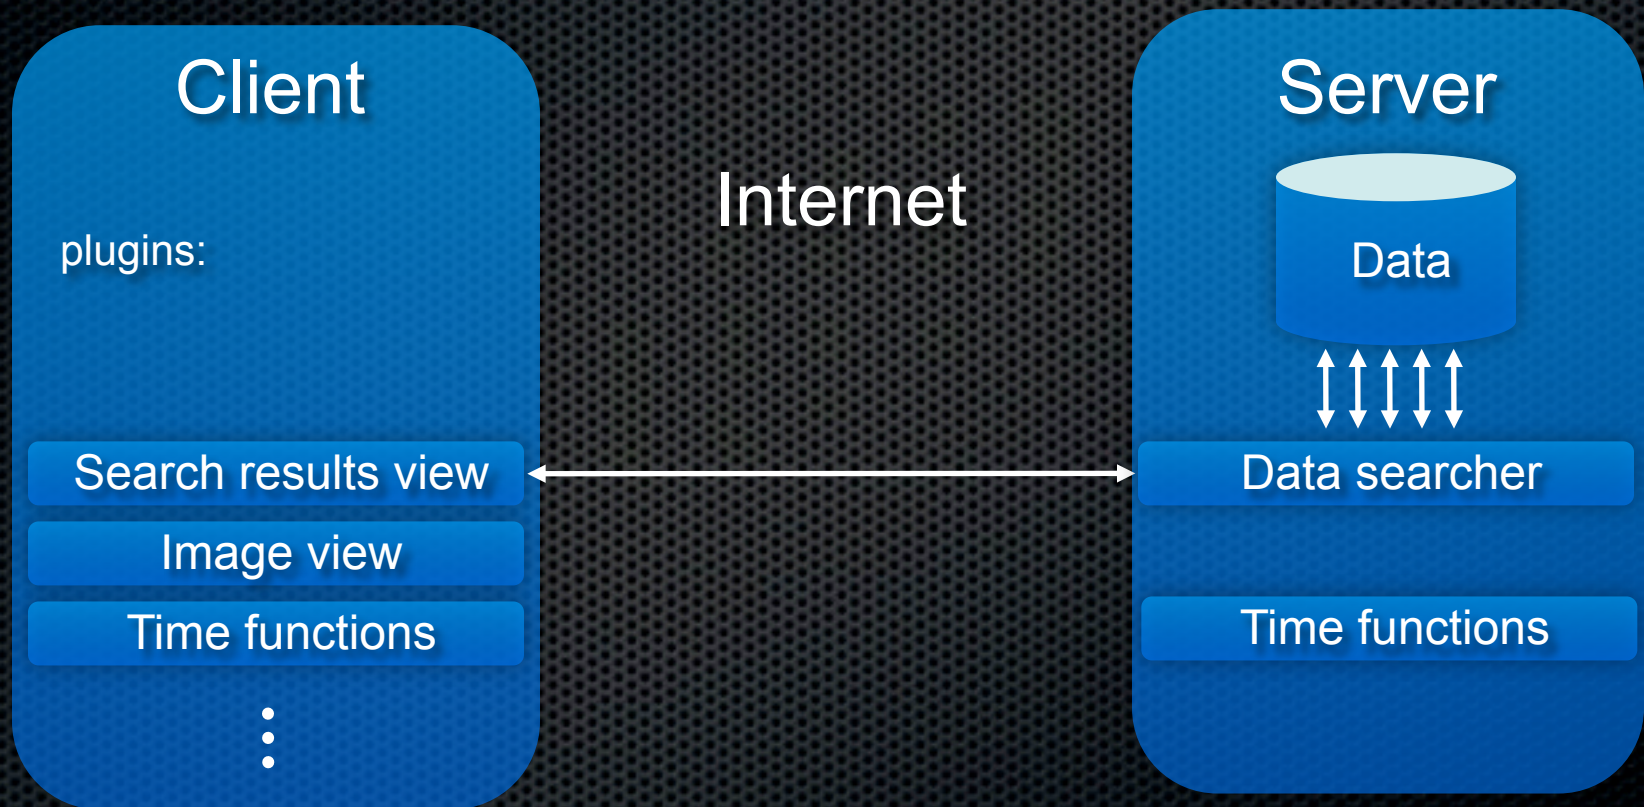

# What brought us to ReST & Equinox: Migrating capabilities to the server

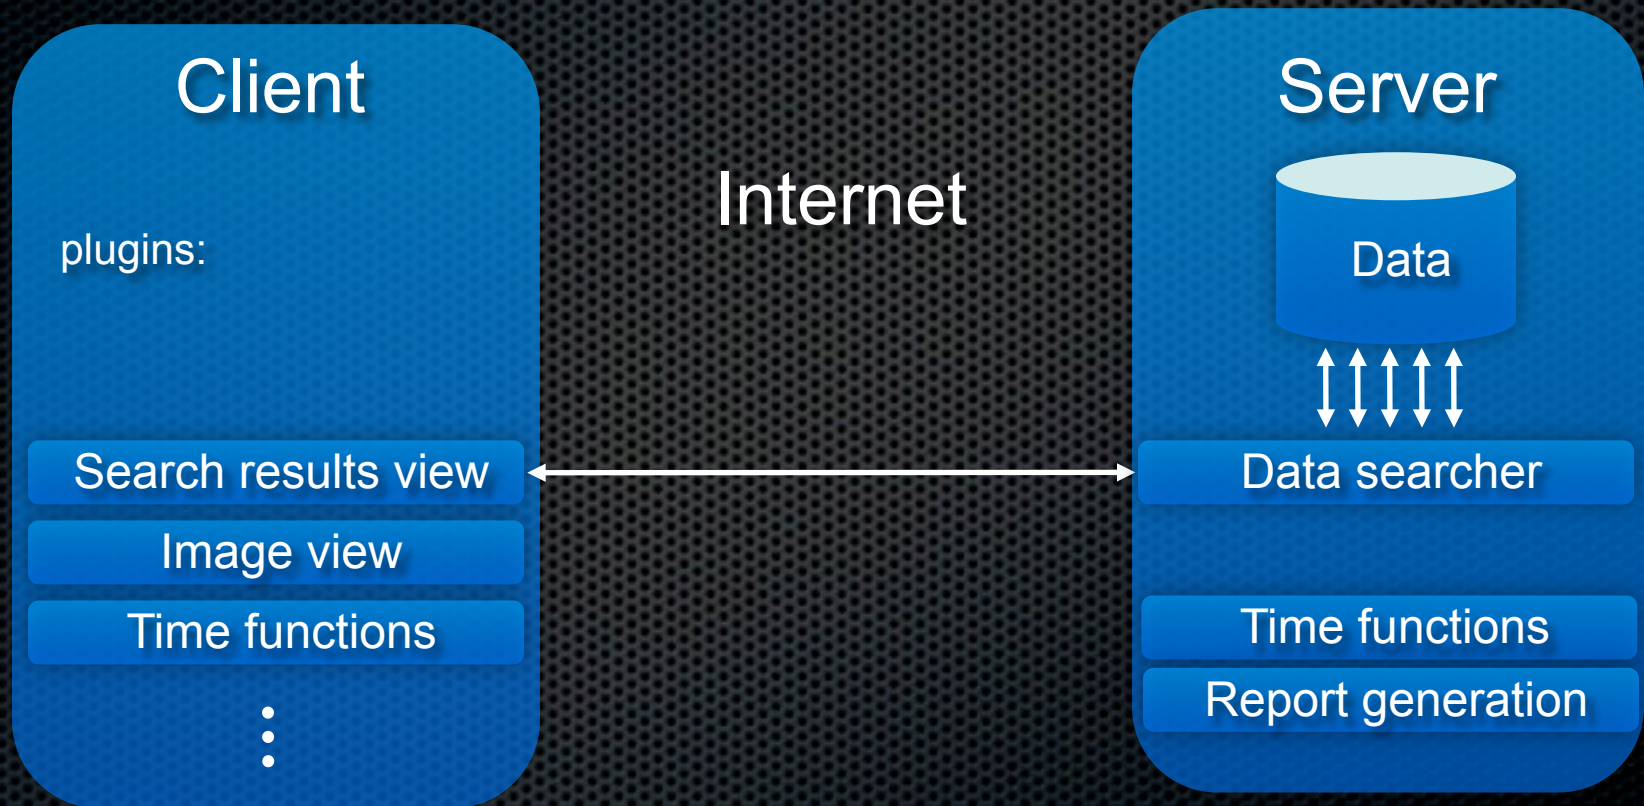

# What brought us to ReST & Equinox: Migrating capabilities to the server

# What brought us to ReST & Equinox: Migrating capabilities to the server

# What is Server-Side Equinox?

**Server-Side Equinox provides the Eclipse RCP plug-in development model for server-side applications**

- Allows the embedding of the Eclipse plug-in environment inside a application server (i.e., Apache Tomcat)
- Uses the same development environment as the Rich Client Platform
- Supports inspection of running programs via an interactive console
- Provides dynamic extensibility
  - ◆ Add new plug-ins without restarting server

# Eclipse RCP + Server-side Equinox = “Tierless Computing”

- Develop many plugins independent of deployment environment
- Share some capabilities between server and client
- Freely migrate capabilities back and forth as needed
- Use a consistent development environment (Eclipse) and component model (OSGi) throughout
- Debug clients and servers simultaneously!

# Why not SOAP?

**CAUTION**  
**FLAME WARS**  
**MAY RESULT**

SOAP and ReST are both viable ways to deploy webapps

*In our experience*, ReST services have been easier to develop and, more importantly, easier for others to use.

Your mileage may vary!

**Our perception of the difficulty of using web services**

# ReST and **Resource** Oriented Architectures

Applications divided into resources (nouns), not services (verbs)

Relies on HTTP methods to define operations on resources

Communicate through exchanging representations of resources : **R**epresentational **S**tate **T**ransfer

Stateless and asynchronous (just like HTTP)

Question: How would you make these servlet URLs ReSTful?

<http://foobar.com/viewUserDetails?userId=123>

<http://foobar.com/addNewUser?userId=456&name=Jeff&team=blue>

<http://foobar.com/findUsers?nameContains=Je>

# ReST leverages http

- Standard, well-documented protocol for communication between a client and server
- URIs for *everything*
  - Universal addressability
  - Easy linking among resources
- Provides the essential CRUD operations on resources
  - PUT, GET, POST, DELETE
- Cacheable
- Easy to use in every programming language (even scripting languages)
- Easy to test from a web browser (esp. Firefox with Poster plugin)

Question: When should you use POST instead of PUT?

# Reporting status from ReSTful applications

- HTTP Status Codes provide a rich, standardized language for describing the server's response to a request. Examples:
- Successful Codes (2XX):
  - 200 OK
  - 201 Created
  - 202 Accepted
  - 204 No Content
- Client Error (4xx)
  - ◆ 400 Bad Request
  - ◆ 401 Unauthorized
  - ◆ 403 Forbidden
  - ◆ 404 Not Found
  - ◆ 405 Method Not Allowed
- Redirection Codes (3XX):
  - 301 Moved Permanently
  - 304 Not Modified
- Server Errors (5xx)
  - ◆ 500 Internal Server Error

Question: What code would you use to indicate that the client included invalid characters in the request? To report that the server ran out of memory? To reject a deletion request?

# Restlet

(<http://www.restlet.org/>)

- API developed by Noelios Consulting
- Streamlines the development of ReSTful webapps
- Addresses some limitations of traditional servlets
  - Provides powerful URI mapping and parsing capabilities
  - Decouples IO from web applications

# Ensemble ReST Framework

- Simply an integration of the Restlet API with Equinox, developed by NASA
- Allows easy definition of new Restlet Resources via extension points
- Provides some convenience utilities for handling requests
- Open source! All code provided in this tutorial is available online via the Open Channel Foundation

# Tutorial

# Our Toy Example: ReSTBots

- ReSTBots are simple robot simulations with the following attributes:
  - Name
  - Position (x,y) - the current location of the ReSTBot
  - Goal (x,y) - where the ReSTBot has been commanded to move to
  - Direction (x,y) - current drive direction (velocity vector)
- ReSTBots repel each other like identically charged particles
- ReSTBots can be represented in XML

```
<Restbot name="Foo"  
  x="1"  y="2"  
  gx="3"  gy="4"  
  dx=".1"  dy=".1" />
```

# ReSTBot Server

- ◆ ReSTful server containing the following resources:
- ◆ <http://localhost:8180/restbots> → *RestbotListingResource*
  - ◆ All ReSTBots on the server
- ◆ <http://localhost:8180/restbots/{name}> → *RestbotResource*
  - ◆ A single named ReSTBot
- ◆ <http://localhost:8180/restbots/{name}/pic> → *RestbotPictureResource*
  - ◆ The picture for a named ReSTBot

Question: What would you expect to happen if you performed a PUT on the second resource URL? How would you interpret a return code of 409 (CONFLICT)?

# ReSTBot execution loops

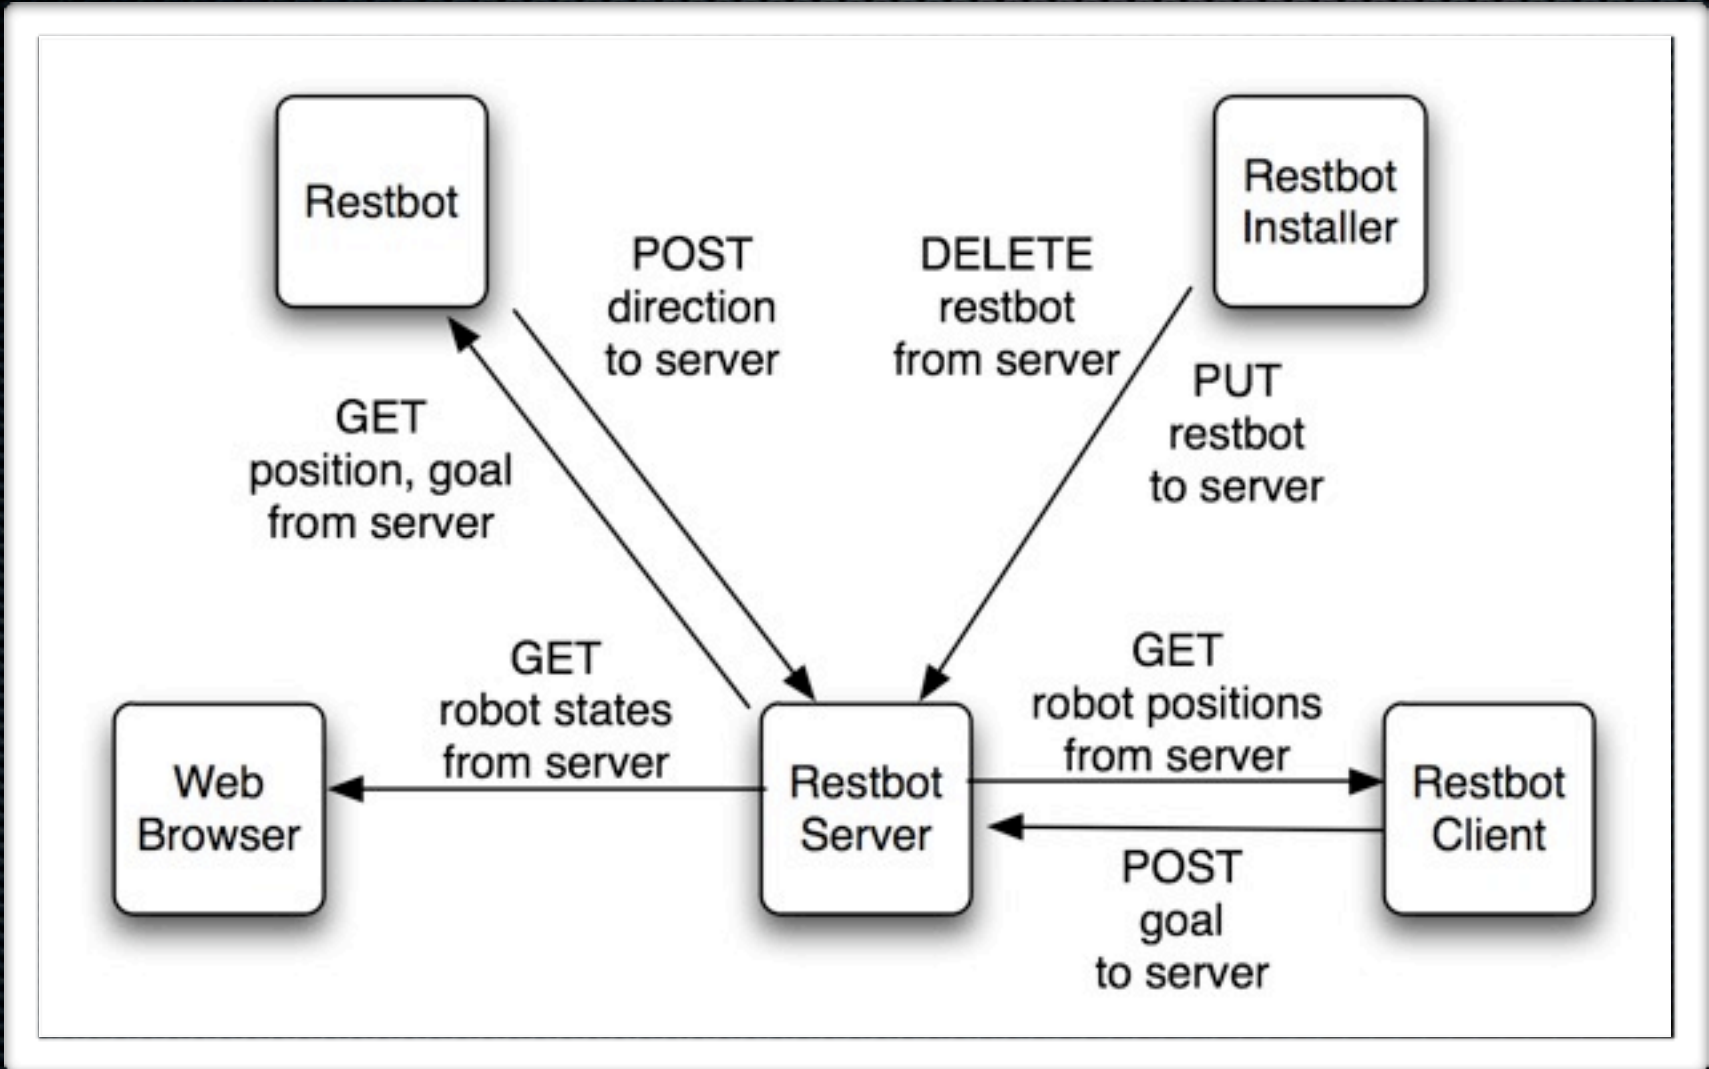

- ◆ ReSTBots execute this loop:
  - ◆ GET current position and goal
  - ◆ Compute a new direction and POST it
- ◆ The ReSTBot server executes this loop:
  - ◆ For each ReSTBot:
    - ◆ Access its current position and direction
    - ◆ Compute a new position based on the direction
  - ◆ Other clients can inject new goals for ReSTBots

Yes, there is a synchronization problem here. Correcting it would have made this tutorial a lot more complicated.

# Overview of tutorial application

# Tutorial Plugins

- `gov.nasa.ensemble.core.restlet` → Ensemble Equinox/ReSTlet System
  
- `gov.nasa.ensemble.restbots.client`  
`gov.nasa.ensemble.restbots.common` → Example plugins developed  
`gov.nasa.ensemble.restbots.server` specifically for this tutorial
  
- `org.apache.commons.codec`  
`org.apache.commons.httpclient` → Third-party utilities for http, logging,  
`org.apache.log4j` and XML translation  
`org.apache.xalan-j`
  
- `org.restlet` → Noelios ReSTlet API

# Exercise 0:

# Launch the ReSTBot System

- Switch to “workspace\_0”
- Goals:
  - Create and start a runtime config for the ReSTBot Server
  - Start RestbotClient to visualize the arena
  - Start RestbotInstaller to add robots to the arena
- You’ll need this command-line argument:
  - `-Dorg.eclipse.equinox.http.jetty.http.port=8180`

## Create, manage, and run configurations

Create a configuration to launch the OSGi framework.

First, stop all running applications

Start First

Start Second

Start Third

Normal Startup Output

# The OSGi Console

```
osgi>
```

- Great tool for managing your OSGi environment
- Allows you to diagnose, install, uninstall, start, stop, update bundles
- Similar functionality available through a web interface:
  - Knopflerfish `http_console`

# Firefox Poster Plugin (Testing)

The image shows the Firefox Poster plugin interface. On the left, the 'Request' tab is active, showing a configuration for a GET request to `http://localhost:8180/restbots` with content type `text/xml`. The 'Actions' section shows 'GET' selected. The 'Content to Send' area is empty.

The main window displays the response for the GET request. The status is 200. The response body is an XML document with the following structure:

```
<?xml version="1.0" encoding="ISO-8859-1"?>
<Restbots>
  <Restbot dirX="0.0" dirY="0.0" goalX="96.59724993263075" goalY="265.79465893239865" name="3" x="395.55843677202694" y="97.93331612591093"/>
  <Restbot dirX="0.0" dirY="0.0" goalX="293.0091387235563" goalY="458.4660045655985" name="5" x="399.07736526453124" y="242.19353523791582"/>
  <Restbot dirX="0.0" dirY="0.0" goalX="51.915405641075495" goalY="10.411345818972407" name="7" x="0.019951349573984256" y="0.5965184002138604"/>

  <Restbot dirX="0.0" dirY="0.0" goalX="260.35301865544267" goalY="0.5764896666247132" name="4" x="0.29901066453105812" y="293.9234590449714"/>
  <Restbot dirX="0.0" dirY="0.0" goalX="499.46164469268996" goalY="72.016181167716617" name="8" x="0.244277607081844"/>
</Restbots>
```

The 'Headers' section of the response is as follows:

Date	Mon, 23 Mar 2009 05:45:54 GMT, Mon, 23 Mar 2009 05:45:54 Gi
Server	Jetty/5.1.x (Mac OS X/10.5.6 i386 java/1.5.0_16, Noelios-Restlet-
Content-Type	application/xml
Transfer-Encoding	chunked

# CRUD with Restlet 1.1

- `storeRepresentation(Representation entity)`
  - Called by `handlePut()`
- `represent(Variant variant)`
  - Called by `handleGet()`
- `acceptRepresentation(Representation entity)`
  - Called by `handlePost()`
- `removeRepresentations()`
  - Called by `handleDelete()`

# Exercise 1

- ◆ Switch to “workspace\_1”
- ◆ Goals:
  - ◆ Learn how to accept updates to a resource
  - ◆ Write a client that updates a resource
- ◆ Classes to modify:
  - ◆ `gov.nasa.ensemble.restbots.server.RestbotResource`
    - ◆ `acceptRepresentation()` - accept updates to ReSTBot direction and goal
  - ◆ `gov.nasa.ensemble.restbots.common.Restbot`
    - ◆ `updateGoal()` - POST updated goal based on mouse click in RestbotClient view

# RestbotResource.acceptRepresentation(Representation entity)

@Override

```
public void acceptRepresentation(Representation entity) throws ResourceException {
    String name = getRequestParameter("name");
    Restbot restbot = Restbot.getRestbot(name);

    try {
        if (restbot == null ) {
            //TODO send proper response if restbot is not found
            getResponse().setStatus(Status.CLIENT_ERROR_NOT_FOUND, "No restbot with this name exists");
            return;
        }
        InputStream inputStream = getRequest().getEntity().getStream();
        if (restbot.updateFromXML(inputStream)) {
            getResponse().setStatus(Status.SUCCESS_OK, "Restbot updated");
        } else {
            getResponse().setStatus(Status.CLIENT_ERROR_BAD_REQUEST, "Check the XML in the body");
        }
    } catch (ParserConfigurationException e) {
        trace.error(e);
        getResponse().setStatus(Status.CLIENT_ERROR_BAD_REQUEST, e.getMessage());
    } catch (NumberFormatException nfe) {
        trace.error(nfe);
        getResponse().setStatus(Status.CLIENT_ERROR_BAD_REQUEST, nfe.getMessage());
    } catch (IllegalStateException ise){
        trace.info(ise);
        getResponse().setStatus(Status.CLIENT_ERROR_BAD_REQUEST," The restbot name does in the body does not match the URI");
    } catch (IOException e) {
        trace.error(e);
        getResponse().setStatus(Status.SERVER_ERROR_INTERNAL, "IOException while reading from input stream");
    }
}
```

# Restbot.updateGoal()

```
/**
 * This method is used to update the server about the direction of the
 * rover. The server may give consideration to the direction of the rover
 * when calculating the new position of the rover. Before updating the
 * server, the restbot will calculate its direction based on its current
 * position and the goal position.
 */
public void updateGoal() {
    Document doc;
    HttpClient client = HttpClientUtils.getClient();
    PostMethod post = new PostMethod(resbotURI);
    try {
        doc = DocumentBuilderFactory.newInstance().newDocumentBuilder().newDocument();
        Element restbotElement = doc.createElement("restbot");
        doc.appendChild(restbotElement);
        restbotElement.setAttribute(Restbot.NAME_ATTR, getName());
        restbotElement.setAttribute(Restbot.GOAL_X_ATTR, String.valueOf(getGoalX()));
        restbotElement.setAttribute(Restbot.GOAL_Y_ATTR, String.valueOf(getGoalY()));
        String docAsStr = Restbot.serializeDocument(doc);
        StringRequestEntity requestEntity = new StringRequestEntity(docAsStr, "text/xml", "UTF-8");
        post.setRequestEntity(requestEntity);
        int resp = client.executeMethod(post);
        trace.info("Updated the server with my goal and received response:" + resp);
    } catch (ParserConfigurationException e) {
        trace.error(e);
    } catch (IOException e) {
        trace.error(e);
    } finally {
        post.releaseConnection();
    }
}
```

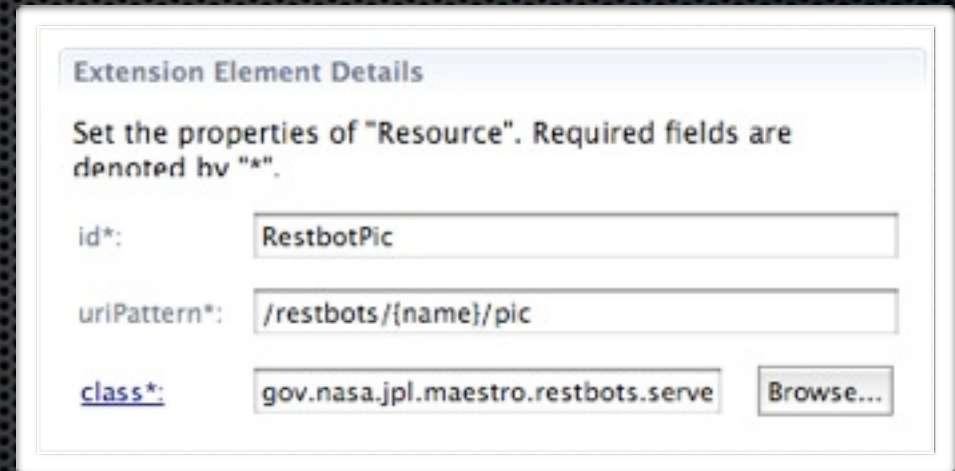

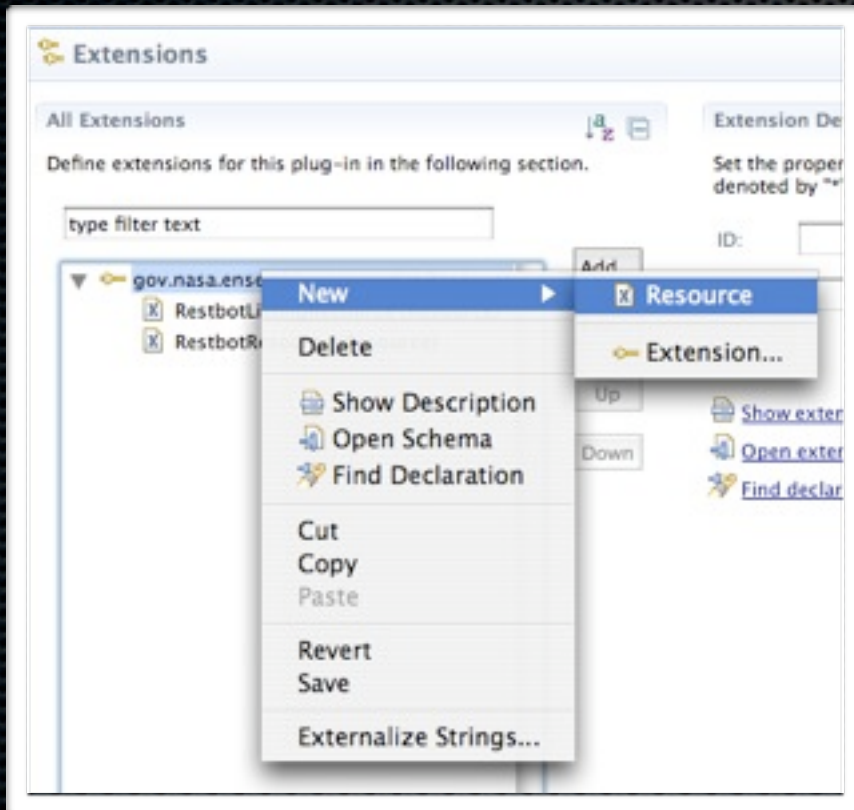

# Exercise 2 : Your own resource

- Switch to “workspace\_2”
- Goals:
  - Create, register, and develop a new resource
  - Leverage the ReSTlet API for operating on the resource
  - Use HTTP status codes
- Tasks:
  - Create a new resource
  - Register the resource through extension point
  - Implement required methods
  - Modify client to access the resource
  - Add status codes to your resource
  - Modify client to interpret and handle status codes

# Adding a new Resource

- Open plugin.xml from gov.nasa.ensemble.restbots.server
- Switch to the Extensions tab
- Right-click on Extension point and add new Resource

- Fill out details
- Recommended class name:  
gov.nasa.jpl.maestro.restbots.server.  
RestbotPictureResource
- Move new extension point to top

# RestbotPictureResource.represent(Variant variant)

```
@Override
public void represent(Variant variant) {
    String restbotName = getRequestParameter("name");
    Restbot restbot = Restbot.getRestbot(restbotName);
    if (restbot == null) {
        getResponse().setStatus(Status.CLIENT_ERROR_NOT_FOUND, "No restbot
with this name exists");
        return null;
    }

    byte[] image = restbot.getImageData(false);
    if (image == null) {
        getResponse().setStatus(Status.CLIENT_ERROR_NOT_FOUND, "This
restbot does not have a picture");
        return null;
    }
    return new ByteArrayRepresentation(image);
}
```

## RestbotPictureResource.storeRepresentation(Representation entity)

```
@Override
public void storeRepresentation(Representation entity) throws ResourceException {
    String restbotName = getRequestParam("name");
    Restbot restbot = Restbot.getRestbot(restbotName);
    if (restbot == null) {
        getResponse().setStatus(Status.CLIENT_ERROR_NOT_FOUND, "No restbot with this
name exists");
        return;
    }
    try {
        InputStream stream = getRequest().getEntity().getStream();
        ByteArrayOutputStream bout = new ByteArrayOutputStream(stream.available());
        byte[] buf = new byte[stream.available()];
        int len = 0;
        while ((len = stream.read(buf)) >= 0) {
            bout.write(buf, 0, len);
        }
        restbot.setImageData(bout.toByteArray());
    } catch (IOException e) {
        trace.error(e);
        getResponse().setStatus(Status.SERVER_ERROR_INTERNAL, e.getMessage());
    }
}
```

# RestbotPictureResource.removeRepresentations()

```
@Override
public void removeRepresentations() {
    String restbotName = getRequestParameter("name");
    Restbot restbot = Restbot.getRestbot(restbotName);
    if (restbot == null) {
        getResponse().setStatus(Status.CLIENT_ERROR_NOT_FOUND, "No
restbot with this name exists");
        return;
    }
    restbot.setImageData(null);
}
```

# Tips, Tricks, and Best Practices

# HTTP Methods

- Safe Methods
  - GET
  - HEAD
- Idempotent methods
  - GET
  - HEAD
  - PUT
  - DELETE
- Unsafe and non-idempotent method:
  - POST

Question: Why is this important?

# JSR-311

- ✦ POJO based and HTTP-Centric
- ✦ Included in Java EE 6
- ✦ Discovery and description NOT a goal, but ...
- ✦ Matured into JAX-RS as of October, 2008
- ✦ Annotation based Restful programming

```
package com.sun.jersey.samples.helloworld.resources;

import javax.ws.rs.GET;
import javax.ws.rs.Produces;
import javax.ws.rs.Path;

// The Java class will be hosted at the URI path "/helloworld"
@Path("/helloworld")
public class HelloWorldResource {

    // The Java method will process HTTP GET requests
    @GET
    // The Java method will produce content identified by the MIME Media
    // type "text/plain"
    @Produces("text/plain")
    public String getClichedMessage() {
        // Return some cliched textual content
        return "Hello World";
    }
}
```

# More on Restlets

- ◆ Representations
- ◆ Security
  - ◆ Guards
  - ◆ Built in authentication schemes: HTTP BASIC, AWS Authentication, HTTP DIGEST support coming in Restlet 1.1
  - ◆ Extensibility

# Securing Your Restlets

- Container managed security vs. Restlet Security
- Guards
  - Available authentication schemes
  - Extending for custom authentication/authorization schemes
- Adding security to Ensemble ReST
- SSL

**jetty://**

```
/* How to add security: */
Guard guard = new Guard (getContext(), ChallengeScheme.HTTP_BASIC, "EnsembleRealm"){
    @Override
    public int authenticate(Request request) {
        //TODO add your own authenticate method
        return super.authenticate(request);
    }

    @Override
    public boolean authorize(Request request) {
        // TODO add your own authorization method
        return super.authorize(request);
    }
};
guard.setNext(router);
return guard;
```

# Accessing a secured Restlet with HttpClient

- ◆ Authentications scheme supported:
  - ◆ HTTP BASIC
  - ◆ HTTP DIGEST
  - ◆ NTLM
- ◆ Extensibility
  - ◆ Custom authentication schemes allowed
  - ◆ Implement the AuthScheme interface
  - ◆ Register by invoking `AuthPolicy.registerScheme()`
- ◆ For more information:
  - ◆ <http://hc.apache.org/httpclient-3.x/authentication.html>

Alert: Take precautions with custom authentication schemes!!!

# Authentication with HttpClient

```
public void secureClient(HttpClient client) {  
    AuthScope authScope = new AuthScope("EnsembleRealm", 8180, "foo.com");  
    UsernamePasswordCredentials creds = new UsernamePasswordCredentials("username", "password");  
    client.getState().setCredentials(authScope, creds);  
}
```

- Create an AuthScope
- Create and set credentials

Question: Why is the AuthScope Important?

# Apache HttpClient Performance

- Use only one client for your entire application
- Application multithreaded?
  - Use `MultiThreadedHttpConnectionManager`
- Release a connection after you are done with EACH request; eg: `get.releaseConnection()`
- Request and Response Streaming
  - `InputStreamRequestEntity`
  - `getResponseBodyAsStream`

Question: What if you need numerous simultaneous connections?

# Recipe for ReSTful Web Applications

- Identify Resources that you would like to expose
- Address addressability
- Decide which operations should be allowed
- Develop the resources (make extensive use of the status codes)
- Test and Deploy

# Conclusion

# Ensemble ReST leverages...

## Eclipse and OSGi

- Eclipse
  - Rapid development with Eclipse (Launch Vehicle)
    - Eclipse Debugger
    - Test application from within IDE
  - Easy export process to production servers
- OSGi
  - Modularity in code
  - Runtime extensibility
  - Changes can be limited to specific modules
    - Rapid deployment of modifications
    - Minimizes risks when redeploying

# Ensemble ReST leverages...

## HTTP and ReST

- ◆ HTTP Protocol
  - ◆ Widely supported
    - ◆ Programming Languages
    - ◆ Web Browsers
  - ◆ Resources are completely decoupled
  - ◆ Fast performance, especially for binary transfers
  - ◆ Standardized authentication and encryption schemes
- ◆ ReST

# Key Development Considerations

- How modular is your code base? (OSGi)
- How easy is it to access your application? (ReST)
- How hard is it to debug the application (Eclipse)
- What impact does adding a resource have on:
  - Existing clients
  - Existing applications
- How can you test your application?
  - JUnit
  - Firefox Poster Plugin
- How to secure the application and still make it accessible? (HTTP, SSL)
