

Introductory Robotics Unit

Marianna O'Brien
Lincoln Middle School
Spring 2004

Day 13* This part of the unit may be significantly longer, depending on how much time you spend on the teaching and explaining the physics involved.

Objective: Start a vocabulary list or add to an existing glossary.

Materials:

Bold terms below

Physical Science textbook

Simple robot made to demonstrate physics terms

Demos in parentheses next to term below

*Any resources you use to teach the Force and Motion standards.

Lesson:

- * **Our understanding of physics begins with:**
 1. **Mass** (Use digital scale or triple beam balance to find mass of robot)
 2. **Inertia** (Place a 3x5 card on top of the robot. Run robot for 3 seconds so that it abruptly stops. Card should continue moving forward because of its inertia. Give students Newton's first law.)
 3. **Force** (Run robot to push/pull a small object forward/backward)
 4. **Friction** (Use wheels with different amounts of traction to demonstrate this term on a slanted surface.)
 5. **Acceleration** (Run robot to go in a circle or to turn to demonstrate acceleration. Remember that when the robot starts and stops is also an example of acceleration)
- Students use textbooks to define the above terms.

- **Our understanding of Lego Mindstorm starts with:**
 1. **RCX** – The programmable Lego brick functioning as an autonomous microcomputer
 2. **ROBOLAB** – The computer software product name
 3. **LabView™** - The computer programming language on which ROBOLAB is based
 4. **Firmware** – The RCX operating system
 5. **USB transmitter** – A USB style transmitter used to transfer a computer program to the RCX
 6. **Parts box** – The green box with lid that contains all of the parts for each robotics kit
 7. **Storage box** – The clear/ shoe box used to store robots between class periods
- Give definitions of the above using an overhead or PowerPoint Presentation.

Assessment:

Share out responses for each set of definitions.

* Take questions during demo with RCX

Quiz when appropriate. See image on Day 14.
